

BEF-TECT: EASE YOUR MIND

Strategic prevention of milk losses

Bovine ephemeral fever (BEF), is an infectious disease caused by an arthropod-borne rhabdovirus (Bovine ephemeral fever virus (BEFV) affecting cattle and water buffalo (*Bubalus bubalis*).

BEF-TECT Reg. No. G4365 (Act 36/1947)

BEF-TECT is a prophylactic vaccine for the active immunisation of cattle against Bovine ephemeral fever (BEF), also commonly known as three-day stiff-sickness.
